CHANGE LOG

autocode intellect 2.8.x

2016

AUTOSDK 2.8.5 (12.12.2016)

- LPR module: itv.lpr-2.2.3.150
- VM module: itv.vm-3.2.0.97

> Product documentation for users and administrators is available on our wiki:
> https://vitcompany.atlassian.net/wiki/display/vitdocs/AutoCode+Intellect

new opportunities

- Based on new version of our license plate recognition engine (AutoSDK 2.5.14).
- Ready for integration with Intellect Enterprise 4.10.1.
- Supports Sentinel EMS 7.4.
- The /tools directory of itv.lpr-2.2.3.150-eoawt distribution package now contains the LicenceViewer utility.

fixed bugs

- Incorrect display of Arabic license numbers in Viewer module's GUI (while viewing, filtering and exporting events, as well as editing the license numbers manually).
- Incorrect modules' operation after updating Intellect Enterprise from 4.9.8 to 4.10.0 and 4.10.1.
- Errors while writing events to the database.
- Incorrect minimal size limitations of the Recognition display's window.

known bugs

Unable to playback the video from arhive in the Recognition display's window.

other changes

- Starting from the MSSQL 2014 version, the frames no longer get the titres overlayed.
- Meta data storage duration (one of the settings of connection with the database) is now 1 day by default, not 7.
